Curves In The Road

*Written by Mark L. Koch,
Nebraska Region
Sales Manager
Wayne Store*

Is mother-nature in charge or are you? As we have seen the last few months from low to high temperatures, too dry, wind and hail – we definitely are not in control. You have seen it first-hand that we cannot control the weather, as mother-nature has left us with a “few curves in the road.”

Spring planting was done in Nebraska and started over for some after a little too much of the white combine (hail that is). Being in all of our trade territories the last month we all have adequate moisture at this time. The pre-season planter, seeding and sprayer tillage programs are ongoing at this time.

Do you have the right combination of equipment for your needs after harvest and next spring? We all struggled with the residue left over from a good fall 2013 harvest. This left another “curve in the road” and question, what is the best solution? What tools do we use or need for tillage, seeding, planting and equipment for your operation? Grossenburg Implement has the tools and knowledge to help all of our customers and help solve your problems. With our wide array of tillage and planting options, we can provide the solutions needed.

To start out the fall, we have a good selection of combines, headers and grain carts to meet your needs. With our attractive financing and lease options, we can meet your needs and fill in the gaps. Speaking of residue from harvest, our HillCo behind the combine with a baler unit works excellent for getting the stalk and corn cobs directly into your baler from your “S” Series combine. Baling stalks and stubble may be a great start for our spring seedbed solutions, please come into any of our seven locations for more information.

There is some talk about Section 179 Depreciation again and how it will come into play this fall, we will keep everyone up to date on this- at least to the best of our knowledge.

Grossenburg Implement is striving to be the best companion you can have for new and used equipment options that are available. Check out our changing inventory on our new website to see what may be a better fit for your operation.

Thanks again for all your support and business.

Hillco single pass baler

Building Progress

*Written by Dave Olson
Store Manager
Wayne, NE Store*

Our building progress is a little behind of where we wanted to be as strong winds and rains slowed the process of getting the roof on the building. We do anticipate being able to move into part of the shop area of the building by the end of June. We should be installing shelving, furniture, and other fixtures in the parts and sales area and start moving into those areas in early July. At the time of writing this article we are working on several areas inside the building including electrical, plumbing, fire suppression, air line installation, and painting and flooring. We have set a date for grand re-opening of our business for August 7, 2014. This day will also be a

delayed John Deere Day because we did not have a place to have the event last Winter. On August 7, 2014 we will have John Deere displays as well as some of the other equipment we are dealers for with representatives on hand to answer questions. The event will also include a band during the evening hours. More details of the event will be announced as we get closer.

Mural at the front desk.

Some of the features of the new building include a 100' x 160' sales and parts area, a 100' x 350' shop area, and a 60' x 105' combination wash bay and tool storage area. The shop area includes (2) 3 ton cranes and (2) 6 ton cranes that run the length of the shop. The shop has a 40' x 20' door, a 23' x 20' door and a 12' x 12' door for pickup traffic. There is a bulk oil delivery system to all the bays of the shop and an exhaust system for venting tractor exhaust out of the building. The wash bay area is 36' x 105' allowing us to pull loaded trucks through the bay to wash off equipment. The building is designed to make our service department more efficient than we were in the previous building allowing us to service more equipment in a shorter time frame. We will have an active display area in the lot with a single span demo center pivot that will be irrigating a test plot where we have a moisture probe installed.

Showroom from above.

**Grand Reopening Date
Thursday, August 7, 2014**

To include John Deere Days

Ask for more details as the date approaches.

What is the Future for Farming?

How many times have you heard someone say that they can't make that equipment any bigger, it can't work any faster or they can't get any more technology in that machine. Many of us have seen a lot of change over the past years in how the task of planting, caring for and harvesting a crop has been made easier and more accurate, but where is the end of the change, surely it can't change much more? I am pretty sure that this is one place where the word "can't" is not an option, so where are we headed next?

Written by Doug Olson,
Integrated Solutions Manager

Wayne, NE Store

This is one of the big questions that we are looking at on a daily basis as we look to what's next. We have been preparing a lot for the advanced products that are coming down the line for new equipment and management products from John Deere. One of these that we have focused on for some time now is the MyJohnDeere.com website and getting our customers setup and prepared to use it. We have been setting up a few customers and getting it figured out as we have been getting machines setup and able to do Wireless Data Transfer (WDT) as well as the Field Connect moisture probes that we have been installing recently.

Through the MyJohnDeere website customers are able to remotely manage the data that is coming from their machines and have even been able to submit crop insurance planting reports electronically to their crop insurance agents. This is just one of the many features available on this site, customers are able to view their John Deere Field Connect moisture and weather data from a link in this site, view their JDLink equipped John Deere equipment and receiver alerts on locations, operating conditions and diagnostic codes.

These data management tools along with access to your John Deere Financial account and John Deere parts are just a few of the things that you can access from the MyJohnDeere website with one simple login and password to your personal data on a secure site. One of the key features

Machine Sync in the field

www.grossenburg.com

MACHINE SYNC

Machine Sync Videos available on our NEW website under the AMS tab

of the MyJohnDeere site is that it is your data and you are the one in control of who can access it and use it. For more information on the data policies go to www.deere.com/trust to read more on how John Deere protects your data. We at Grossenburg Implement have also adopted similar policies to make sure that all of your data is protected in our dealership as well as on the MyJohnDeere website.

In an effort to help customers understand the website we have begun to put some sample data into a demo account that we have setup for you to look at and see what some of these features are. Anyone can go to the website www.myjohndeere.com and login to the site with the username: gidemo123 and password: gidemo123 this will give access to see what is available on the site. Some of the links on this demo site will not have information in them but one that does is the Field Connect link where you can view the data from our demo units that are installed.

To learn more about how these changes can help your operation be more efficient and productive in managing your equipment, operators and both agronomic and machine data, please visit with one of our Integrated Solutions specialists at a Grossenburg location. We will explain the benefits of the site and help you to setup and validate your account so that you can be sure that you are in control of your data.

Maintaining Your Irrigation Systems

*Written by Scott Johnson,
Store Manager
Wayne, NE Store*

We are well into irrigation season now but mother nature seems to be helping us out a little with rains in the territory, only problem is it brings severe weather with it that we don't need.

Don't forget that when you service your irrigation engine to also change fuel filters for the season. If you do have any fuel related issues we can run fuel cleaner through your engine or if more serious our Winner location is an authorized diesel repair station for Bosch and Denso with genuine factory repair parts on hand. We are an authorized sales distributor for Stanadyne fuel systems, fuel conditioner and filtration. If you are at one of the other seven Grossenburg locations we can send it to Winner for repair or we have a good assortment of rebuilt pumps and injectors on hand that we can transfer around between locations on a daily basis. Also check the fuel tank for clean fuel quality, drain off any water that has accumulated on bottom of tank and check over fuel hoses for any cracks or deterioration that has occurred over winter and could tend to leak or suck air.

We also repair all radiators for the Nebraska side at our Laurel location and move around product daily. For our South Dakota locations they repair them at Pierre and Winner locations.

With a pretty good start to the season and crop situation there is still time to think about your forage harvester and combine needs. From knives and shearbar to spouts and liners a inspection will surely increase efficiency of your production and even fuel efficiency with today's high fuel prices to add dollars to your pocket.

By the time this newsletter comes out, the Wayne store should start the process of moving back to original location and all seven locations will be starting to plan for upcoming combine and AMS clinics for fall harvest. Lets plan for a safe summer and we are looking forward to seeing everyone at our clinics.

With combines, downtime is a major issue. With an inspection program you can choose which items you want to repair, from just the major items to the complete checkup for those who have little time and a lot of acres to cover. Another option to have done during the checkup is to update the software on your machine. With today's computerized technology, this will help cure any previous problems and help your machine run more efficiently. When we hookup service advisor to your machine we can check if a newer version is available by downloading and installing it in very little time.

Employee Spotlight

Think Ahead And Save Some Green

*Written by Kevin Peters,
Parts Manager
Wayne, NE Store*

Planting season has come and gone and although we haven't had the best circumstances to deal with, everything went fairly well. I would like to thank everyone for their business this past spring, and hope everything has gone well for all of you also. For those of you thinking of doing some early combine/harvest maintenance, John Deere Financial has their 150 Day No Payment No Interest Program, please ask for more details.

Through everyday business, sometimes we forget these programs exist, and for that

I apologize. These programs are here and we just need to use them. It may be used as a good cash flow tool for you. Also keep in mind, for our customers in Northeast Nebraska, the fall harvest catalog will be starting July 14 through August 15. This will be the best time for discounts. As for getting into our new building, we will be moving parts when you get this newsletter. Everything is looking nice and we are also looking forward to being at one location again. I am guessing that it will take a good year to get everything in its place and coded in the computer – far from over – but it will be nice when it's done. As always thank you for your patience and understanding these past few months. We will look forward to seeing you at the open house!

LANKOTA®

Lankota is a family owned business located in the heart of the Midwest in Huron, SD. With farming being their heritage, those farming values have carried through into the manufacturing world. Lankota is known for quality products, exceptional technical support, and same day shipping.

TECHNOLOGICAL LEADER IN STALK STOMPERS®

Lankota is the technological leader in combine header Stalk Stompers® and has introduced Stalk Stompers® for R and 30 Series 4WD Tractors. This helps prevent tire wear in corn and bean stubble, saving you costly dollars in tire repairs.

1000 GALLON POLY FERTILIZER TANK

Wet conditions that can plague the farmer are addressed with Lankota 1000 gallon poly fertilizer tank that utilizes the flotation of the 4WD tractor to disperse the liquid weight ,yet maintain visibility.

TOW CABLE KITS

Tow Cable kits are also available for R and 30 Series 4WD Tractor that attach to the center of the tractor to maximize and leverage the pulling of the tractor.

NEW COMBINE HITCH

New for the 2014 Harvest Season is our Telescoping Swivel Hitch for 70 and "S" Series Combines. The TH910 telescopes 20" for easy hookup and extends 5.8' behind the rear axle. It is constructed of high strength box tubing. There are three different swivel positions: *normal* for offset towing for better visibility; *angled* for centerline towing for traveling narrow roads; or *storage* for field operation to maximize ground clearance.

AUGER EXTENSION KIT

The 4 foot High Unload Rate Auger Extension Kit is available for any JD® high unload rate auger. This provides additional room for wider heads to make unloading grain easy and efficient. The 3 foot Auger Extension option is available for JD® 6620 to 9750 Combines.

NEW this harvest season, is the grain saver door option for JD® high unload rate augers or any Lankota HUR Auger Extension. This helps prevent unnecessary grain loss when every bit counts!

VISION

Successfully maintain core values of the generation business while progressing in the industry's innovations with emphasis on customer services, employee compensation and community patronage.
