John Deere Days and Upcoming Clinics

*Written by Dave Olson
Store Lead
Wayne, NE Store*

We have been operating in our new facility at the Wayne location for almost a year and a half now and enjoying the extra space and working environment. The parts department continues to find the right area for bulky parts and organizing their storage. The technicians have changed the alignment of the work areas and are finding the best location for special service equipment. The sales department continues to

work on arranging the inside display area and the lot. If you have not visited us since the rebuild we encourage you to stop in and let us show you our new facility.

There will be several opportunities for you to check out our new building in the first few months of the New Year. Our John Deere Day will be held Thursday January 7, 2016. We are planning on having displays of new equipment, parts and service items. There will be a series of short classes that you can attend while here on varied topics some of which include; Sprayer tip technology and selection, My John Deere. Com, introduction of new machines, service check up programs, service agreements and irrigation products. With the closing of the location in Laurel we would encourage customers from the Laurel area to attend the Wayne JD Day or the Hartington JD Day on January 13, 2016. The Bloomfield location will also be having JD Day on January 12, 2016. The next week the South Dakota locations will have JD Day at Winner on January 18th, Philip on January 20th and Pierre on January 22nd. We encourage you to attend one of these events good information, good conversation with staff and neighbors along with some good food as well.

All of the locations will be having clinics during February and March on tractors, seeding equipment, spraying equipment and AMS products. Because we sell Reinke center pivots at the Wayne location we will be having a clinic dealing with pivot maintenance and also the John Deere Field Connect product that will help producers to manage their irrigation and conserve water. These clinics are a great time to get to know our staff better and for us to become more familiar with your operations so we can serve your needs better. We hope you will be able to attend these events and get to know our staff better as we have the opportunity to help in the decision making of your farming operation.

GROSSENBURG IMPLEMENT New Equipment Programs

Finance Department - In Control

Written by Mark L. Koch
Nebraska Sales Manager
Wayne, NE Store

The decision to be in control of what we can or cannot change- we cannot control the weather, but we can control the outcome of our decision making for a better way of life. We all hope everyone had a blessed holiday season and ready to move on with a New Year.

As we start a New Year- commodity prices, inputs, production estimates are all on our horizons. So what can we control? First off, see what you and we can do to help your operation.

Review what you have done in past years and ask yourself, can we do better somewhere?

Our pre-season service with inspections, adding some attachments to compliment your equipment for the upcoming planting season. Handling residue is always an issue, so a tillage pass and planter upgrades may be a place to improve spring planting. Do not forget about the livestock in your operation, take a look at what could help your time management. Better decisions are made early, rather than flying by the seat of our pants.

Grossenburg Implement can help with new technology and ideas to better provide for the upcoming season.

With new and used equipment programs we can accommodate a payment and terms that will fit your operation. As a partner with you we have added to our sales force, Joe Aschoff from Osmond and Courtney Berg will be in Wayne, also. All of your sales team can help with your solutions as we move into spring.

Remember Safety and have a game plan in place for problems that arise. A couple of extra seconds or minutes may seem like a long time, but may save a Major Issue. Grossenburg Implement wants to be you partner for many seasons to come.

**Don't put those machines away yet!
Get them inspected at your nearest
Grossenburg location.**

Service – Getting your machines inspected

*Written by Kurt Daum
Service Manager
Wayne, NE Store*

After a very successful harvest don't put those machines away yet. A lot of bushels were put through these machines this year which caused extra wear. Our winter promotion specials have begun and the lists are growing rapidly. Don't forget about your tractors, balers and planters too. Once we get past the New Year, spring always seems just like it's around the corner. So be sure to look over Grossenburg promotions and take advantage of all of the specials offered through John Deere Financial such as No Payment No Interest plans.

At Grossenburg Implement we like to think we are among the top service departments in South Dakota and Nebraska. We have well trained technicians that will be performing these inspections. These technicians continue their education through John Deere training during the winter months. We do this to better serve you the customer during your busy season, in order to minimize your down time. All of us here at Grossenburg Implement would like to wish everyone a very successful and prosperous 2016 and thank you very much for your business.

AMS- John Deere Farm Sight Products

Written by Doug Olson

Corporate ISM

(Integrated Solutions Manager)

Wayne, NE Store

Now what do we do? Harvest is over and the equipment is put away for another season, inputs are ordered for next year and all of the data recorded on your display from last season has been unloaded and analyzed. Or has it? What are you doing with all the years of data that you have collected off of your farming operations?

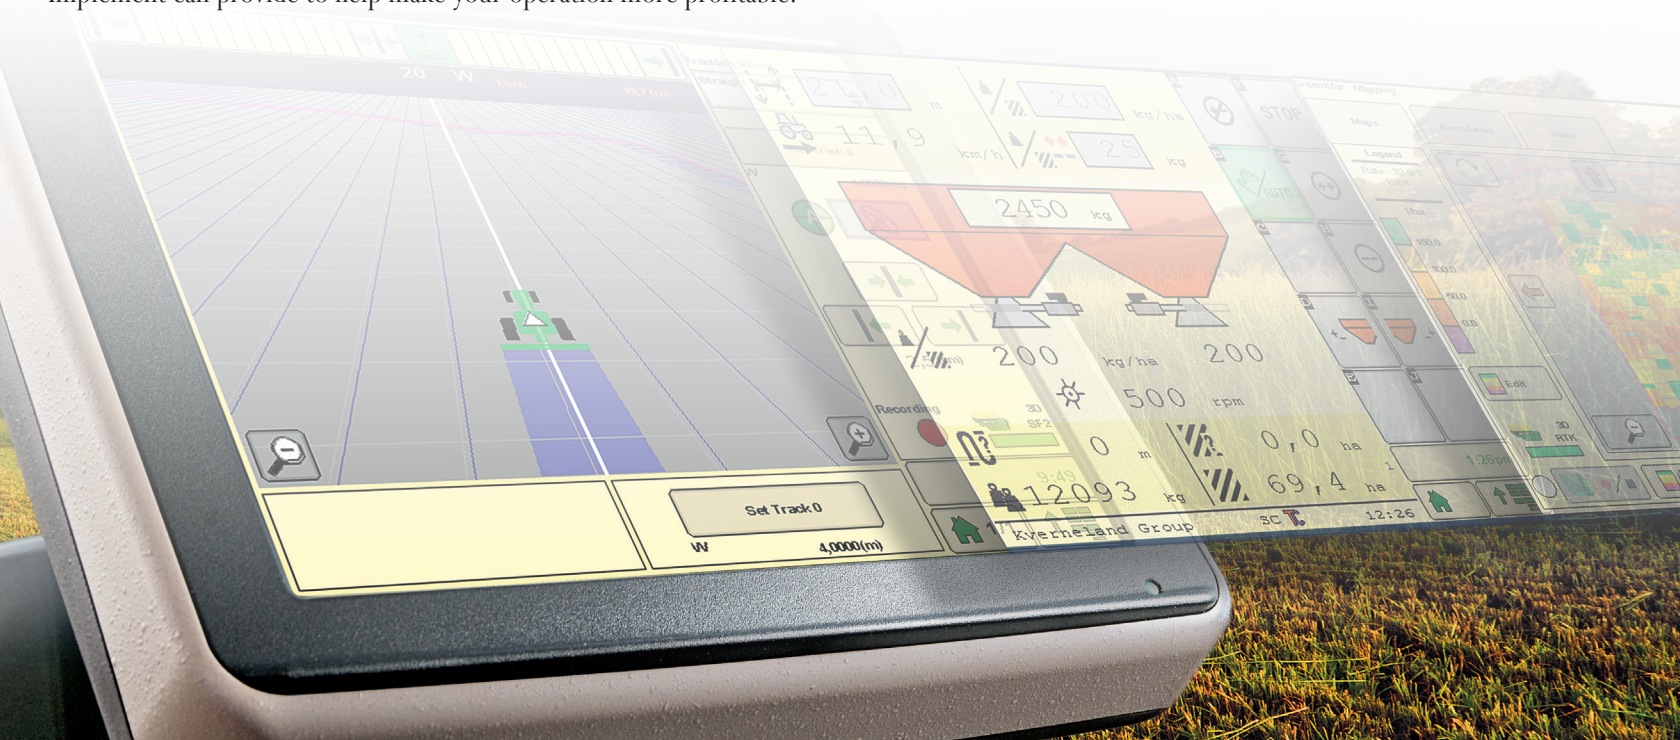

It has been nearly 20 years since the GPS satellite corrections were opened up for private usage and many of the early agricultural uses of this technology date back to that time period. It took a while for the data recording technology to become an integrated part of most farming operations but now the large majority of equipment in the field is capable of some level of documentation. What levels of documentation do you have and what value can this add to your farming operation?

Many things have changed in the last 20 years and many improvements have been made over the technologies that were available at that time. Yield monitors have become more accurate and with a little time spent on calibrations can be very accurate in most conditions, we can also record how accurately an operation, such as planting, is being performed. We now have the ability to record when and where a product was applied and under what conditions the operations was performed. The next steps are controlling how products are applied by automatic control of rate, depth and overlap, but what are the factors that determine when these changes are made?

With the full line of John Deere Farm Sight products that are available, we at Grossenburg Implement can assist you with the answers to many of these questions. In the past years it was a challenge knowing what to do with the data that a single machine collected because it may have to be processed through a specific software application. Now with the enhancements that have been made to the technologies that are on the equipment that you own many new options are available.

One of the biggest tools available today for customers with John Deere and selected other brands of equipment is the MyJohnDeere.com Operations Center. Through this portal, whether you use a JDLink telematics option or manually load data to this portal it puts it into a format that is now able to be shared to many of your other trusted advisors for your farming operation. The data from the Operations Center can be setup to be automatically available to a partner (trusted advisor) that you choose or can manually be sent by individual files to separate trusted advisors. One other advantage of the Operation Center for machines that are equipped with the JDLink telematics option is the ability to have a backup copy of the data being recorded at the completion of each field.

We know that the process of making all of these new technologies fit into individual operations can be a bit of a challenge. Each farming operation, though they may raise the same product, is slightly different and that adds to the challenge of applying these new technologies. This is why we at Grossenburg Implement are constantly learning and training our employees to be able to understand how these products work and we will sit down with each individual operation and make a customized plan that can provide the most benefit for your needs. Please contact one of the Grossenburg Implement locations near you or feel free to contact me personally and we will setup a time to discuss what products and services that Grossenburg Implement can provide to help make your operation more profitable.

CFR 1251 Bale Pro®

- Blends two bales into a healthy ration
- Provides quality feeding; the new door leaves the most desirable windrow to date of any bale processor
- Tall, narrow windrow with mixed hay, metered grain and chopped have the cows eating rather than walking

CFR 650/651 Bale Pro®

- With Feed Chopper™ & Metered Grain Insertion System™*
- Places processed hay in a windrow in the field or into a bunk
 - Spreads straw evenly for reduced bedding costs

CFR 650 TopGun®

- Provides uniform coverage as it throws material in excess of 100'
- An essential tool for coverage solutions for mine sites, oil well sites & road construction
- A must have for hoop barns & feedlots
