LET US PUT OUR HEAD IN YOUR GAME

*Written by Jeff Swartz
Store Lead
Pierre, SD*

Grossenburg Imp. in 2009 took on a new line of sunflower headers by the brand name of Fantini. The company is based in Italy and has a North America location for distribution in Le Center, MN. The company was new to North America, but has been in business in overseas market since 1968.

We looked the heads over and knowing our customers needed a modern and reliable head that would help with seed loss with no down time. We were very impressed on the quality of construction and the design of the pans to catch any seeds that may be lost during the transition of cutting the stalk to auger.

In certain field conditions sunflower losses can vary with variety and dryness. We decided to demo these heads and found the seed loss to be next to nothing! In confection seeds, where loses are just the nature of the beast, these heads shine above all others. Some customers have told us they have seen seed savings from 200 lbs an acre to 500 lbs an acre. That puts more crop in the tank instead of the on the ground, which in turn means more money in our customers pocket.

The unique features of these heads are the rubber block gathering chains that hold the stalk straight up instead of leaning them over and shaking the seeds out of the heads. The speed of the head can be matched to combine ground speed for a nice even flow in to the combine. The knives are a circular rotating knife that cuts the stalk off in front of the gathering chains without jarring the head. The pan design will catch any seeds that may have been lost and flows them back in to the header auger. The auger design has deep flighting that helps feed all the stalks and heads down the length of the head to have a smooth transition in to the feeder house.

Fantini Headers Will Work On Any Model Of Combines

Row unit gears run in an oil bath for exceptional durability and longevity. Robust drive lines, u-joints and bearings ensure hours of trouble free operation. These heads have several configurations to fit your needs. These heads are also adaptable to other bands of machines with little effort. They are available in 8 and 12 rows 30", 36" and 40". Larger heads include 16 row 22", 30", 36" and 40". The 18 row comes in a 20" or 22" configuration.

We have numerous heads out and have seen the durability, reliability and seed savings that is unmatched by any of our competitor's heads. The Fantini Company is very customer driven and great match with Grossenburg Imp where "SERVICE IS THE OTHER HALF OF A GREAT PRODUCT".

ROLLER CHAIN

Written by Don Adamson
Parts Manager
Pierre, SD Store

Why John Deere roller chain? With its long wear life and the low maintenance you expect from this U.S. made chain, choose John Deere. This chain is factory preloaded during assembly, which seats the chain components from minimizing elongation of the chain. The chain is heat treated for maximum toughness and wear resistance. John Deere chain has solid rollers not seamed, this allows smooth rotation on the bushings, and it is dipped in a 230-degree lubricant that protects all load-bearing surfaces. I have sold the John Deere chain for 40 years and my customers have had great success. Choose from sizes 35 up to 240. Available in ten foot or fifty foot rolls.

BOSCH DIESEL INJECTOR TESTING MACHINE

Grossenburg Implement is pleased to announce that we have just purchased a Bosch EPS 205 Common Rail Diesel Injector testing machine! With this purchase, we are able to test almost any Common Rail Diesel Injectors you may have. This ranges from pickup trucks, cars, semi-trucks, Case IH or any other branded equipment with common rail diesel injection systems.

- As you know injectors can cost \$500-800+ per injector.
- We are offering a customer retail price of \$43.00 per injector.
- Why spend extra \$ when the remaining injectors are still working?
- This becomes increasingly important as warranties expire.

Larry Nordside is our diesel injector/diesel pump specialist. Larry has 30+ years working with injectors and pumps- specializing in Bosch and Deere. Please give Larry a call or email at our Winner location for more information today.

Pierre, SD Store

LAUREL STORE CLOSING

Dear Valued Customer

The Grossenburg family has made a decision to close the Laurel store on November 1, 2015. This was a very difficult decision to make. The town of Laurel made a good offer on some land that made it even more difficult.

Consolidation of agriculture has occurred over the last 20 years and when we bought Northeast Equipment, Inc., we did not buy the Laurel building, it was rented from the McCorkindale family. We did buy the buildings of the other three Northeast Equipment locations. At first, our main goal was to build an addition on the Bloomfield building in 2014, but a tornado came and took the Wayne store in October 2013. That changed our way of thinking quite a bit because we built a beautiful, brand new 65,000 square foot building with overhead cranes.

We have since finished the addition at our Bloomfield location. It is an air-conditioned 15,000 square foot shop with two overhead cranes. The Laurel store is an old store with no cranes, no air-conditioning and we do not own the building. With the building of the two new store on both ends of Nebraska locations we feel that Laurel needs to be consolidated into the other three stores.

We have very good employees at Laurel and most of them will have jobs at the other stores. It is not easy for a town to lose a business and it is not easy for us to take the business from a small town. We are from a small town and we understand the problems, but this is the direction that agriculture is taking us and we have to forge ahead.

We appreciate all of the business you have given us at the Laurel store. Adam Severson and my daughter Lanie, live in Wayne, and are well acquainted with Northeast Nebraska. Adam and I have tussled this over a long time, it wasn't easy but this is what we are going to do. We thank you for all of your business in the past and we hope we can continue to do business with the people of Laurel and the community in the future.

Thank You

Barry Grossenburg
CEO/President

AMS UPDATE

AMS- MyJohnDeere is here to help!

*Written by Dan Jensen
Integrated Solutions Specialist
Pierre/Winner, SD store*

Most John Deere customers have already been introduced to Wireless Data Transfer along with MyJohnDeere.com and JDLink, but I feel there is a pretty good share of producers out there that still need to be informed of these new and exciting things John Deere is using to make your day to day operation more efficient than ever before. Not only will MyJohnDeere.com keep a producer more efficient, but will help the producer keep better track of their data in the field and out of the field. MyJohnDeere also has tools to allow you to make fast decision when you're in the field and time is against your back. With more work to do than ever before, MyJohnDeere is here to help. Briefly, let me tell you about some of the things MyJohnDeere has to offer.

First, I'd like to talk about the great product that everyone has grown accustomed to knowing over the past couple years. You have also learned over the past few years it helps us collect and manage data- what is it that I'm talking about? It's JDLink. With JDLink producers are able to monitor many machine functions from their computer or smart phone. The JDLink website has many great features like machine utilization information. With machine utilization information you can tell what percentage of a tractors horsepower is being utilized, how much time an operator sits in a combine with a full tank waiting to dump and how much fuel the machine has burned idling. This information allows the producer to make informed decisions on machinery needs. If your combine spends quite a bit of time idling with the grain tank full, maybe it is time to add another grain cart or semi. Another example is if your tractor is only utilizing 40% of available horsepower while doing tillage, maybe you could use a bigger disk or a smaller tractor.

The best feature of JDLink is diagnostic code monitoring. When a machine equipped with JDLink generates a diagnostic code- that code is sent in email form to the service manager of your local Grossenburg Implement dealership. This allows the service manager to notice certain trends in codes and hopefully catch a problem before they even occur. The service manager can also access data like coolant temperature, system voltage, all the way down to what your SCV detent times are set to. Utilizing these diagnostic codes and the data provided on the website, a technician can be informed to fix the issue saving a trip back to town to get the correct parts.

Wireless Data Transfer is a second topic that I'd like to touch base on as well because of the importance of using and saving data. Wireless Data Transfer is a software inside the 2630 display which allows producers to transfer files to and from APEX without ever needing to use a USB flash drive. With Wireless Data Transfer a producer has their setup information organized within APEX by simply transferring the files via a secure website called MyJohnDeere.com to the appropriate display. Inside the machine you can see that there are new setup files waiting and with the click of a button can save your new setup information to the 2630. In order to transfer files from the 2630 back to APEX the operator simply changes fields, just as they always have and the 2630 automatically sends the information to MyJohnDeere.com using the JDLink controller that is located in almost all newer machinery. This can also be done manually at any time. Once the documentation data is sent to MyJohnDeere.com, the customer can either download the data into Apex or view the information through the operations center within the website. Not only does this get your information into APEX sooner, but it also backs up the data instantly in case there is an issue with a display. This insures that your data is safe and secure.

The operations center has some similar functions to APEX. You can view and print maps, manage boundaries and guidance lines along with compare multiple years of data. These maps are viewed over top of a Google Earth image so that you have a visual reference of exactly where a problem area may exist.

MyJohnDeere.com operations center has the ability to share files with trusted advisors. The producer is able to give different levels of access to people outside the operation. With this feature your agronomist will be able to view and download your documentation files from the website with your permission and then use that information to create variable rate seeding and fertilizer prescriptions. Once the prescriptions are done, they simply send the files directly from their computer to your 2630 display without leaving their office. This can result in quicker turnaround times on these services and security knowing that your information will not be misplaced. Best of all- this can all be done without any work on the producers end.

I know there is a lot of customers out there wondering and worried about their privacy of their data being on the internet and who has access to it. I understand the customers concern and I have a simple answer to all the concerns. The answer is the customer owns that data and nobody will have access to it other than the people that they give permission to. On the dealer side of things, we at Grossenburg Implement are committed to ensure the data will be safe. We understand the importance of the data that is collected by an operation and the importance of keeping this data secure and in the control of the proper owner. We have developed privacy policies to protect not only financial data, like we always have, but also to protect any agronomic or machine data as well.

With all the data available today, producers are able to make faster and better decisions than ever before. It is easy to find problem areas within an operation, but using the data we are able to go back and see what these changes have done to our bottom line. With margins getting tighter there is no better time than now to utilize all of the information that we have spent a lot of time and money to collect. If you need help with APEX, MyJohnDeere.com or JDLink please stop by your local Grossenburg Implement location and talk to one of our Integrated Solutions Specialists. If you are from the South Dakota Grossenburg stores come see me- Dan Jensen or call me at 605-222-9716 and I will be happy to assist you.

WINTER WHEAT PLANTING

Written by Jeff Hanson,
Service Manager
Pierre, SD Store

Summer has come to an end and fall has begun. Winter wheat planting and fall harvest is now upon us. With the rain we have received, fall harvest is looking good in most areas. Please remember to keep your combines cleaned off to reduce fire risk, especially in sunflowers.

Starting November 1st, our Winter Inspections will be starting. To minimize downtime and be ready for the upcoming season, I encourage you to take advantage of our winter specials. Please call as soon as you are done with your machines so we can get them scheduled. Under the winter inspection we offer free trucking, a thorough inspection and we send the machine home clean.

We also do software updates while we have them at the shop.

I hope everyone has a safe and good harvest!

Don't forget about our winter specials and call if you have questions!

INTRODUCING THE NEW 9RX SERIES TRACTORS

9RX – The 4-Track Is Finally Here!

It took a while, but John Deere has finally answered the call for a 4-track tractor. Starting this fall, Deere will begin building four models of 4-track tractors. The smaller models will be the 9470RX and 9520RX, which will have the Deere PowerTech 13.5-L engine in them. The larger models, the 9570RX and 9620RX, will come with the Cummins QSX15 engine. All models will be equipped with a 115 GPM hydraulic pump and up to 6 SCV's with an option for another 2 to be field installed by our shop for a total of up to 8 SCV's. The 9RX tractor will also be the first John Deere 4WD tractor to have cab suspension, which will be a standard feature and will increase ride quality.

Case IH has had a QuadTrack for quite a few years now and Versatile has also come out with a 4-track tractor, but there are several features that set John Deere apart from the competition. The first, and most major, feature that really sets the Deere apart is that the entire track set-up is 20% larger than the others on the market. 20% larger means that everything will turn 20% slower, which in turn will make the bogey wheels, tracks and idler wheels last longer. Another huge advantage to the track set-up being 20% larger is with everything moving slower, there will be less friction, which will produce less heat and that is one of the biggest issues with the Case IH QuadTrack. The less heat produced will keep the idler wheels from becoming too hot and cracking. Another important difference between John Deere and the competition is the positioning of the bogey wheels. When looking at a Deere, there are only two bogey wheels, whereas competitors have three. The reason for this difference is that the 9RX does not have a bogey wheel directly below the axle/drive wheel, which will also contribute to a much smoother ride and less bouncing around the field. Another big advantage to the John Deere 9RX is that our drive wheel is spoked as opposed to being a solid wheel. This goes back to the friction/heat issue, as well as helping shed mud, which is where a 4-track tractor really shines. Lastly, the 9RX is equipped with John Deere's proven e18 Powershift Transmission that has been proven tough for decades.

Stop into one of our locations and see if the 9RX would be a good fit for your operation.
